

PROJECT

Build a production-quality desktop application called **PoE2 Forge**.

The application is NOT a build finder.

It is an AI Build Compiler for Path of Exile 2.

Users describe how they want to play.

The system researches the latest Path of Exile 2 information, reasons about mechanics, generates candidate builds, optimizes them, validates them, and outputs a complete build.

The final result should feel like an experienced theorycrafter designed the build.

ABSOLUTE RULES

Only support Path of Exile 2.

Never use Path of Exile 1 data.

Never use PoE1 passive tree.

Never use PoE1 mechanics.

Never use PoE1 uniques.

Never use PoE1 Path of Building.

Everything must be validated against current PoE2 data.

TARGET USERS

Trade League players.

Softcore players.

Hardcore players.

Unlimited budget players.

SSF players.

Min-max players.

Casual players.

PLATFORM

Desktop

Windows first.

Modern UI.

Dark theme.

Fast.

Responsive.

Professional.

GOAL

This application should feel like having a personal Path of Exile 2 theorycrafter with thousands of hours of experience.

The objective is NOT to reproduce popular guides.

The objective is to design the best possible build based on the user's desired gameplay.
